

PathSensors, Inc. (PSI) is a biotechnology company that develops and manufactures products for the detection of dangerous pathogens in the biodefense, agri-security and food safety markets. PSI's detection platform, a cell-based biosensor technology, is revolutionizing the field of pathogen identification in terms of speed and sensitivity. We are currently looking for a dynamic, well-organized individual to fill the role of Production/Operations Manager. This position will lead the company's production processes for liquid and aerosol based detection systems, with a focus on customer satisfaction, product quality and continuous process improvement. There are excellent opportunities for role expansion and advancement within the company for the right candidate.

Immediate production duties will include: overseeing the production and quality control of all of PathSensors products, maintaining and managing component parts inventories, scheduling customer shipments and responding to requests, supervising manufacturing technicians, tracking and trending product and manufacturing performance, implementing and maintaining quality systems, setting process standards through establishment of "Standard Operating Procedures" and working with the scientific and commercialization teams to bring new products to the market.

Operational duties include: maintaining functional equipment in the laboratory and production areas, purchasing and monitoring laboratory housekeeping.

PRIMARY RESPONSIBILITIES FOR THIS ROLE ARE:

- Production and quality control
- Technician and intern management
- Inventory management
- Shipment scheduling
- Tracking and trend analysis of product performance
- New product commercialization

SKILLS AND APTITUDES THAT WILL HELP A CANDIDATE EXCEL IN THIS ROLE:

- Strong organizational skills with attention to details
- Good time management capabilities
- Leadership qualities
- Flexibility and quick decision-making
- Ability to work under strict time schedules
- Good communication skills
- Ability to work with a multi-disciplinary team
- Ability to analyze data and troubleshoot problems
- Strong work ethic
- Willingness to expand roles and responsibilities as needed
- Military and leadership experience is a plus
- Basic Science background is strongly desired
